OVERALL POSTURE

HIGH EXPOSURE

8 confirmed or observed weakness(es) and 9 unverified indicator(s) identified. The score includes unverified indicators and will change after manual validation.

The score is a weighted index of observed weaknesses and completed checks. It is not a certification.

SECURITY SCORE	WEAKNESSES	CONFIRMED / OBSERVED	CHECKS COMPLETED	TREND VS PREVIOUS
45 /100	17	8	100%	+0
High exposure	Critical 1 / High 7 / Medium 5 / Low 4	9 unverified indicator(s) to validate	39 of 39 modules, 0 not completed	vs 45/100 on 2026-10-13 (same test set)

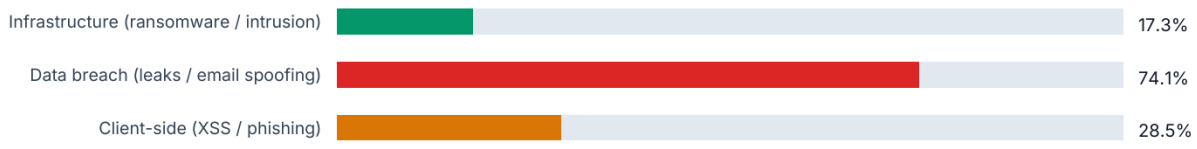

01 CONTROL ASSESSMENT

CONTROL AREA	STATUS	FINDING SUMMARY	EVIDENCE BASIS
Transport and TLS	PASS	Modern TLS only, certificate valid for 63 days	TLSv1.3 / TLS_AES_256_GCM_SHA384
Email authentication	PASS	DMARC enforced (Reject)	SPF: VALID
Web security headers	RISK	5 of 6 observed security headers missing	Missing: HSTS, X-Frame, X-Content, Referrer, Permissions
Exposed network services	REVIEW	3 service port(s) reachable	Bounded TCP probe of predefined common ports
Input handling (injection)	VERIFY	8 indicator(s) need manual verification	Module did not complete (completed/skipped); results are not conclusive
Attack-surface discovery	INFO	1195 endpoints / 6 subdomains / 221 forms	100 pages crawled / 0 JS files / 0 API spec(s)

02 PRIORITY ACTIONS

#	RISK	WHY IT MATTERS	ACTION	EFFORT
1	P2 / Critical	Response behaviour suggests the 'p' parameter may influence a backend SSTI query/template without proper sanitisation	Validate 1 indicator(s) manually, then remediate: Use parameterised queries / an auto-escaping template engine; validate and encode all user input server-side	Medium
2	P3 / High	Response behaviour suggests the 'p' parameter may influence a backend SQLi query/template without proper sanitisation	Validate 1 indicator(s) manually, then remediate: Use parameterised queries / an auto-escaping template engine; validate and encode all user input server-side	Medium
3	P3 / High	Response behaviour suggests the 'p' parameter may influence a backend NoSQLi query/template without proper sanitisation	Validate 1 indicator(s) manually, then remediate: Use parameterised queries / an auto-escaping template engine; validate and encode all user input server-side	Medium
4	P3 / High	Response behaviour suggests the 'url' parameter may influence a backend LDAP query/template without proper sanitisation (3 locations)	Validate 3 indicator(s) manually, then remediate: Use parameterised queries / an auto-escaping template engine; validate and encode all user input server-side	Medium
5	P3 / High	Response behaviour suggests the 'url' parameter may influence a backend XPath query/template without proper sanitisation (2 locations)	Validate 2 indicator(s) manually, then remediate: Use parameterised queries / an auto-escaping template engine; validate and encode all user input server-side	Medium

03 RISK EXPOSURE INDEX (HEURISTIC)

Checks completed: 39 of 39. 0 not completed; areas marked NOT TESTED or REVIEW are not counted as clean. Command-level evidence and the complete findings appendix are in the Technical Report in the same folder.

Scope: authorized, read-only, non-destructive assessment. No exploitation was attempted. Scan 036c4bed5ae33ab4d673bea1 / 2026-10-17.
